

Sensory Motor Group or Individual Support To Augment Distance Learning

Therapists will be working with children on their individual academic curriculums, while also augmenting their social and sensory needs (emotional and physical self regulation). This intensive service delivery model is offered in-clinic on a daily basis. We will be holding group or individual sessions.

Please email our clinic coordinator Mary Welton (mw@littlehandsot.com) with your availability and desire for group or individual sessions or to learn more about the program. Small groups can be formulated based on developmental age, therapeutic goals and academic curriculum.
